YOUR SITE. ONE SYSTEM.

Networked Lighting Controls Platform

A Single Lighting Controls Platform for Indoor & Outdoor Spaces™

nLight is your lighting controls system with wired or wireless options, that grows with your business today and tomorrow. With nLight, you can control indoor and outdoor spaces, reduce energy costs, comply with business codes, improve occupant comfort and more.

Choose the most advanced technology, the intelligent digital lighting controls platform that meets the demand for greater functionality.

Choose this lighting controls platform from Agostini Building Solutions – **LIGHTSOURCE** Division

SIMPLE

nLight is SIMPLE to specify, design, install and setup. It achieves code compliance with CAT5e wired controls or wireless lighting controls with the easy to use mobile application.

SCALABLE

nLight is SCALABLE as is it ideal for any application – small to large, indoor to outdoor or from one room to an entire building.

CONNECTED

nLight CONNECTS light fixtures, sensors and other control devices to create a digital network with unmatched flexibility.

Trusted Performance

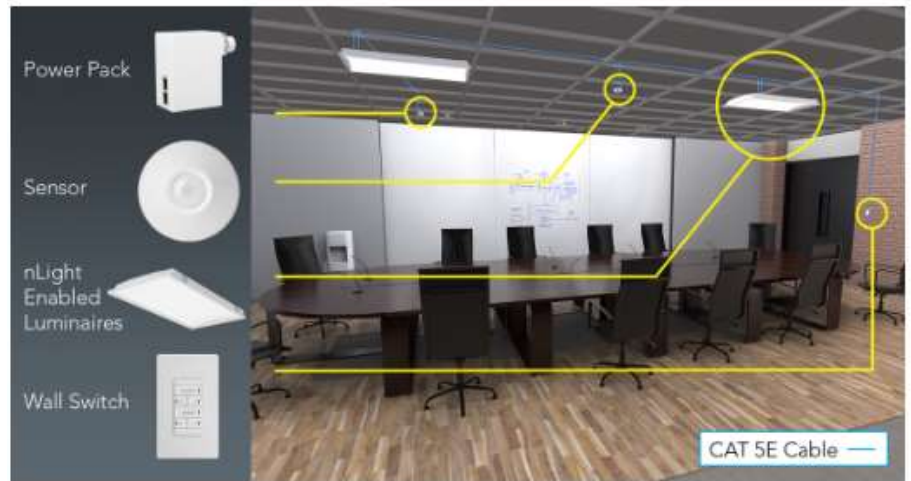

Have peace of mind knowing that nLight products are backed by:

nLight Wired

nLight Wired is a CAT 5e low voltage-based solution that works by establishing a digital communication network between connected devices to create a system with distributed intelligence, as well as enables global access to the building's lighting system via web-based management.

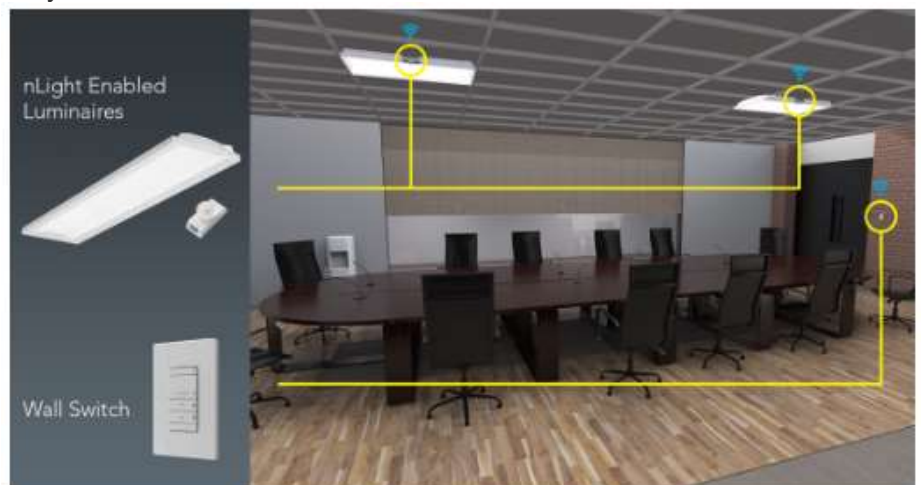

nLight Wired delivers distributed intelligence with all lighting control actions (i.e., On/Off, Raise/Lower, Occupancy/Daylighting, etc...) carried out locally within each individual lighting zone, thus reducing the wiring requirements and associated labor costs.

nLight AIR

nLight AIR is a simplified wireless lighting control solution that eliminates the need to run wires, resulting in an overall lower cost of install. Developed to penetrate typical obstructions found in commercial buildings, nLight AIR simplifies design and installation by embedding sensors directly into a wide variety of indoor and outdoor luminaires.

The comprehensive, integrated security architecture of nLight AIR provides security controls at all product levels from connected luminaires, system controllers, and physical/virtual infrastructure to cloud and mobile applications.

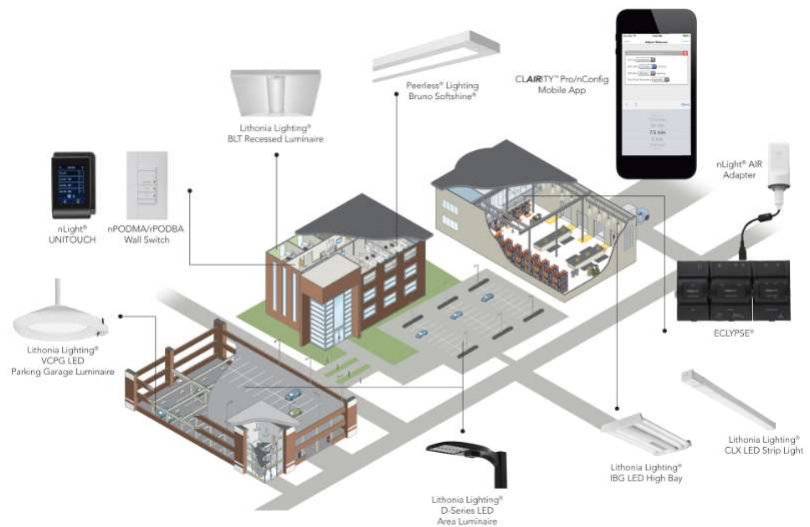

The nLight Platform

Intelligent digital devices include: Occupancy Sensor, Photocell, Wall Switches/ Dimmers, Panels, Power/Relay Packs, Controllers, and Luminaires.

nLight is designed to function as a standalone (one-room solution) or networked across an entire campus, ideal for renovation and new construction projects via their wired or wireless options.

One Room to an Entire Campus Wired – Wireless - Hybrid

Why choose the nLight Platform?

- nLight enabled luminaires contain controls devices that provide a seamless connection to the nLight network via sensors or Bluetooth components.
- Make your already installed fixtures nLight enabled. Fixtures with 0-10V dimmer drivers can be nLight enabled with use of a power pack. Then, fixtures, sensors and other control devices can be connected to create a digital network.
- nLight platform easily connects indoor to outdoor, creating a digital lighting network for your building management system.
